System: Airport Lost Luggage claim and Tracking Portal

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale (short)	Comments
FR-001	Functional	The system shall allow a passenger to report lost baggage.	High	When the passenger submits a lost-baggage report with the required details, the system creates and stores the claim successfully.	Core functionality for initiating a lost-baggage claim.	Should capture all required claim details.
FR-002	Functional	The system shall verify the passenger's ID before processing the lost-baggage claim.	High	When passenger ID verification is requested, the system returns a verified or rejected result; an unverified passenger cannot proceed with claim processing.	Ensures the claim belongs to the correct passenger.	Verification is shown as an included use case.
FR-003	Functional	The system shall allow a passenger to track the baggage scan timeline.	High	When tracking is requested, the system displays the available baggage scan events in chronological order, including the scan time and status when available.	Provides visibility into baggage movement.	Should display the latest available scan information.
FR-004	Functional	The system shall allow a baggage service agent to match a claim to a baggage scan.	High	When a claim and baggage scan are submitted for matching, the system identifies a valid match or reports that no match was found.	Supports locating lost baggage using scan information.	Matching is performed by the baggage service agent.
FR-005	Functional	The system shall validate the baggage tag format before processing a baggage scan.	Medium	When a baggage tag is entered or scanned, the system accepts it only if it conforms to the required tag format; otherwise, it displays a validation error.	Prevents invalid baggage-tag data from entering the matching process.	Corresponds to the 'Validate tag Format' use case.
NFR-001	Nonfunc.	The system shall respond to baggage claim and tracking requests within 3 seconds under normal operating conditions.	High	In a performance test under normal load, at least 95% of claim and tracking requests receive a response within 3 seconds.	Provides responsive service to passengers and baggage agents.	Response time should be measured under defined normal load.

NFR-002	Nonfunc.	The system shall protect passenger identity and lost-baggage claim information from unauthorized access.	High	An unauthorized user attempting to access passenger or claim information is denied access in all tested unauthorized-access cases.	Protects sensitive passenger and baggage information.	Access control should apply to passenger and agent functions.
